

Optical Glasses incl. Transmission and Refraction Spectra

VM-TIM GmbH offers optical glasses OHARA, SCHOTT, CDGM, CORNING from stock in blocks or preformed (grinded or polished) incl. spectral measurements of the transmission as well as the refraction index in the wavelength range 185 ... 5200nm. The accuracy of the transmission measurement is ca. 0.2%. The accuracy of the measurement of the refractive index is ca. 10^{-4} ... 10^{-3} .

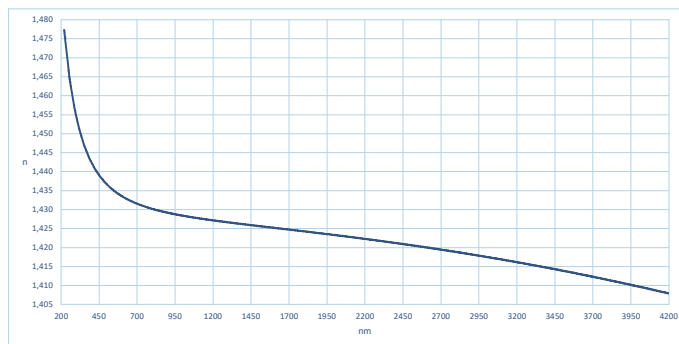

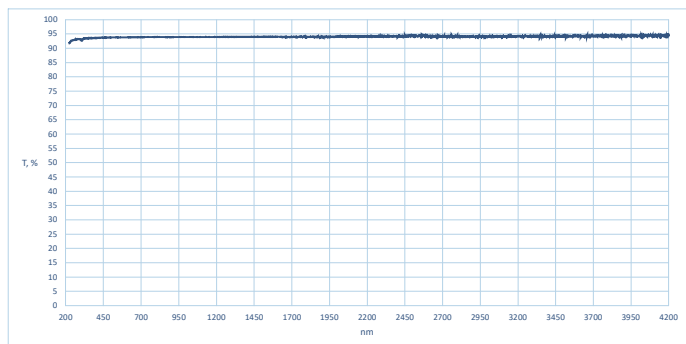

for example S-LAH66

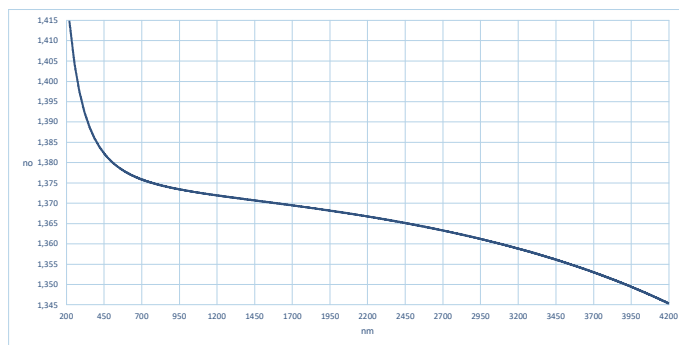

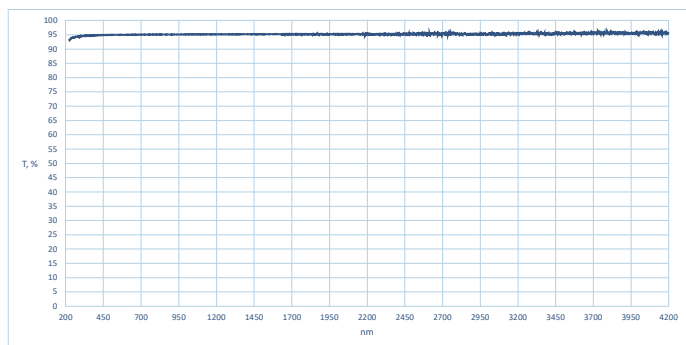

Optical Glasses incl. Transmission and Refraction Spectra

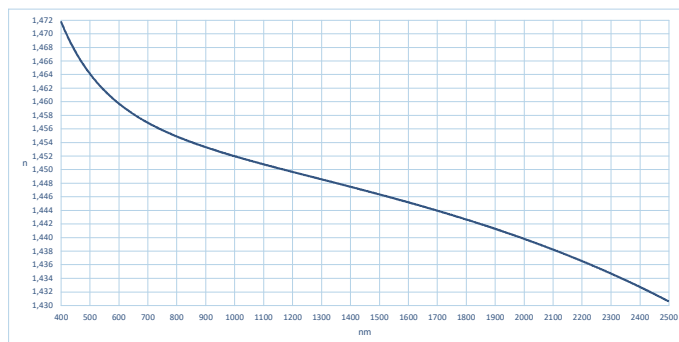

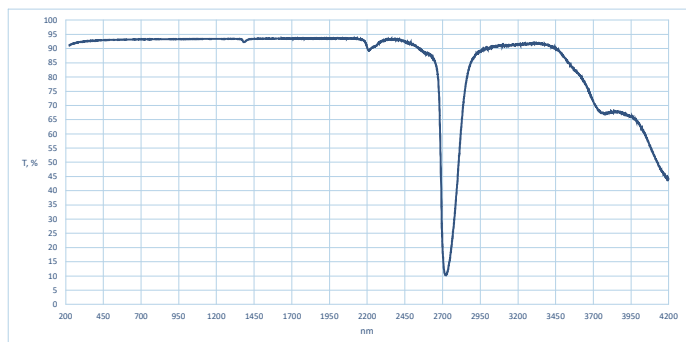

for example CaF_2

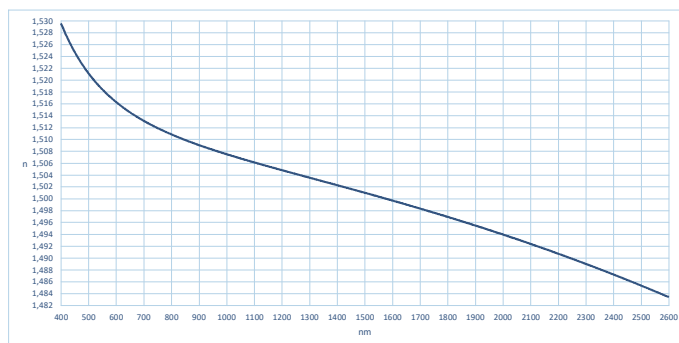

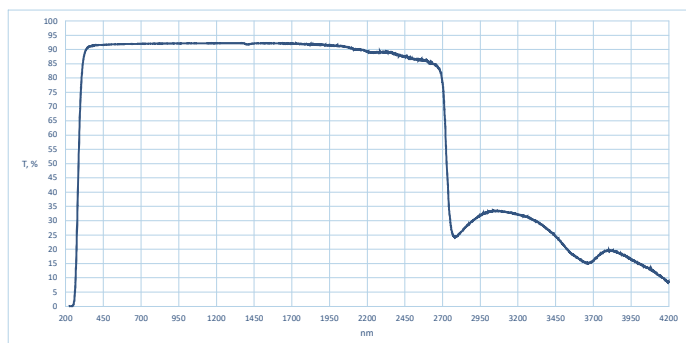

for example MgF_2

for example SK-1300

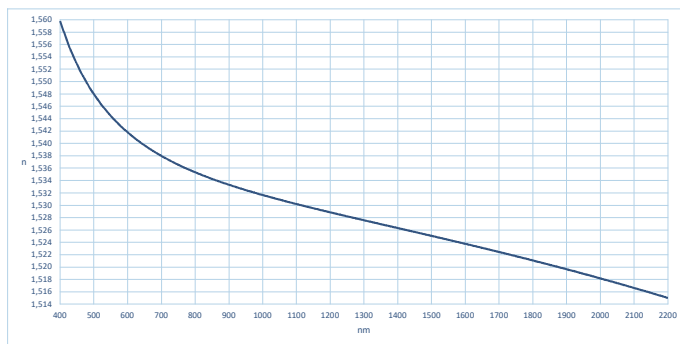

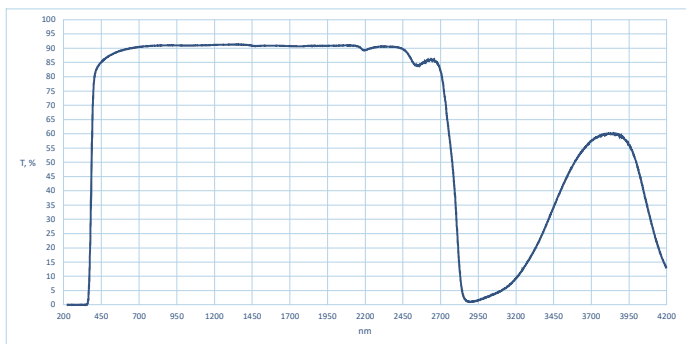

for example S-BL7

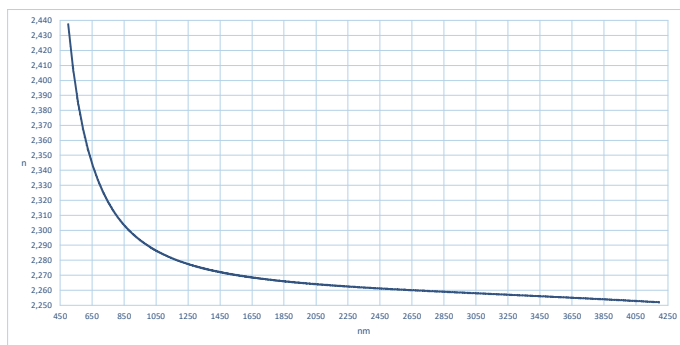

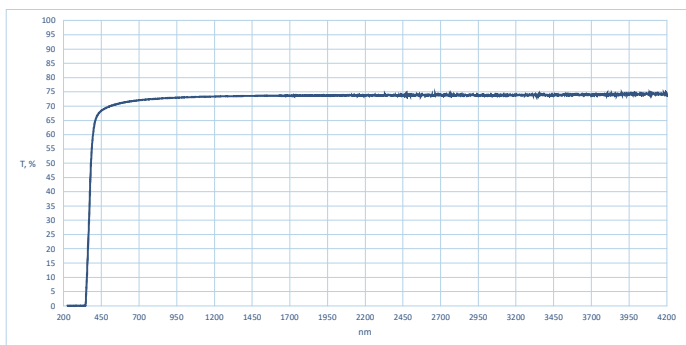

Optical Glasses incl. Transmission and Refraction Spectra

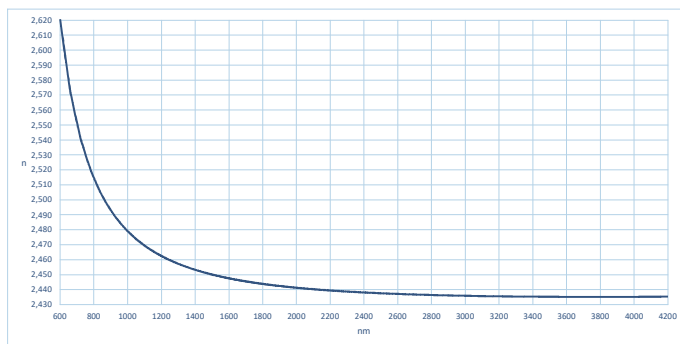

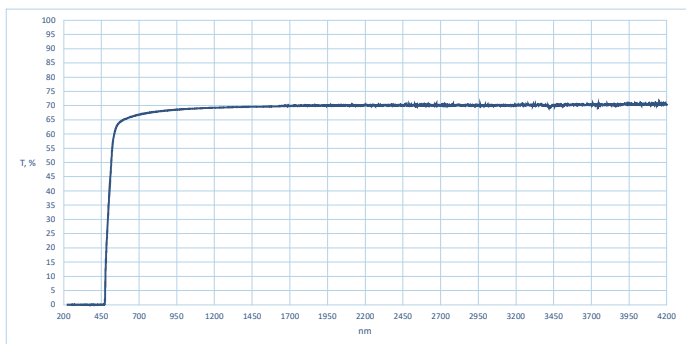

for example Zerodur

for example ZnS

for example ZnSe

for example Si
